

Impact Warning System

- Suitable for Gas, Diesel & Electric Trucks.
- Advised for forklift truck operating areas that are also used by pedestrians.
- Site safety is increased.
- Reduced insurance premiums can be made.

How Impact Savure Works

The system indicates to the operator and those around that the vehicle has suffered an excessive impact.

The system is designed to alert operatives of an impact via audible and visual warning devices mounted in the cab. Off truck personnel are alerted via an external-flashing beacon.

The system features a Supervisor Reset Option.

The alarm can only be de-activated via a Key-switch, which is fitted on the dashboard.

The site manager or supervisor is the only person to have this type of key.

Battery removal disconnected - reconnect will not reset the alarm with this operation.

Technical Specifications

Voltage Range:	8V-32V DC
Minimum Current Standby:	≥ 10mA
Maximum Current Triggered:	≥ 20mA
Nominal Operating Temp:	-10° to + 80°c
Dimensions:	105mm x 72mm x 30mm
IP Rating:	IP67
